

# China South City Shenzhen

## CUSTOMER

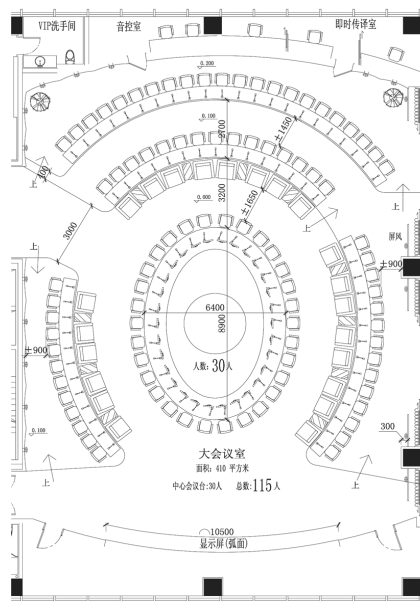

China South City Holdings limited

## The need for a flexible sound system

The floor area of the conference room is about 500 m<sup>2</sup> with a seated capacity of 100. The conference room is a regular rectangle but its furnishing is set as an ellipse, meaning that attendees can be spread throughout the room. The beamsteering capability of the EVO-pbs column speaker proved advantageous in ease of installation, as well as being able to offer seamless coverage while keeping energy away from the reflective rear wall.

The traditional strengths of the EVO-pbs were, of course, also present, with CVS initially being invited to tender due to their reputation for quality, intelligibility, reliability and expandability. Since this landmark project, EVO-pbs have been successfully installed in many more large conference rooms throughout China.

Plan of the conference room at CSC headquarter

## ABOUT THE VENUE

China South City Shenzhen (CSC), founded at the end of 2002, is situated in Shenzhen Pinghu Logistic Park. It's the first project invested by China South City Holdings limited, and since 2003, it's been one of the great construction projects in Shenzhen.
